

Partner Profile Horizon Europe

LOCKSIGHT – REEL IT GROUP

French technology partner specialising in cybersecurity, interoperability and operational resilience

COUNTRY	PROFILE	ROLE SOUGHT	AVAILABILITY
France	Technology SME	Consortium partner	Ready to engage

OUR PARTNERSHIP OBJECTIVE

Locksight – REEL IT Group is seeking to join Horizon Europe consortia as a technology partner. We welcome introductions to coordinators or lead partners preparing proposals in civil security, cybersecurity, operational resilience, data and emerging digital technologies, in line with the targeted calls listed below.

ORGANISATION PROFILE

Locksight, the cybersecurity specialist within REEL IT Group, supports organisations in designing, integrating and operating cybersecurity solutions. Its expertise combines SOC capabilities, incident detection and response, security systems integration, interoperability, data and artificial intelligence. Locksight draws on the resources of its parent group, a French digital services provider, to mobilise the technical and operational expertise required for collaborative European projects.

DIFFERENTIATING TECHNOLOGY ASSET

Locksight deploys and implements IDMEFv2 (Incident Detection Message Exchange Format version 2), a security incident information exchange format used in nearly ten European projects: 7SHIELD, SAFE4SOC, CyberSEAS, PRECINCT, ATLANTIS, ENDURANCE, KINAITICS, TESTUDO and CYBERNEMO.

- Normalisation and correlation of data from heterogeneous sources;
- Secure information exchange between SOCs, SIEM, EDR, NDR, firewalls and monitoring platforms;
- Coverage of cyber, physical, natural and hybrid incidents;
- Support for cross-organisational coordination and SOC-of-SOCs architectures.

TARGETED HORIZON EUROPE CALLS

- HORIZON-CL3-2026-01-DRS-01
- HORIZON-CL3-2026-01-INFRA-02
- HORIZON-CL3-2026-01-SSRI-01
- HORIZON-CL3-2027-02-CS-ECCC-01
- HORIZON-CL4-2027-04-DATA-03
- HORIZON-CL4-2027-04-DIGITAL-EMERGING-04
- HORIZON-CL4-2027-04-DIGITAL-EMERGING-11

EXPERTISE AND PROPOSED CONTRIBUTIONS

ARCHITECTURE & INTEROPERABILITY

Design of information exchange architectures, integration of heterogeneous systems and connectors to existing security platforms.

DATA & AI

Structuring, enrichment and analysis of data, including incident data, to support AI use cases, decision-making and situational awareness.

CYBER-PHYSICAL RESILIENCE

A cross-cutting approach combining cybersecurity, physical security, crisis management and operational continuity.

SOC & INCIDENT RESPONSE

Monitoring, detection, qualification, correlation, orchestration and support for response mechanisms.

DEMONSTRATORS & PILOTS

Adaptation to use cases, integration, testing, validation in operational environments and production of technical deliverables.

DISSEMINATION & EXPLOITATION

Contribution to the exploitation and adoption of results, standardisation and the development of European use cases.

PROPOSED ROLE WITHIN THE CONSORTIUM

Locksight intends to contribute as a technology partner, with a scope tailored to each targeted call, its expected outcomes, use cases and allocation of work packages (WPs). Potential contributions draw on our established expertise in cybersecurity, interoperability, data and AI:

- Provision and adaptation of incident information exchange mechanisms where relevant to the project requirements;
- Contribution to the definition of the architecture and use cases;
- Development of interoperability and secure information exchange mechanisms;
- Integration with existing systems and contribution to demonstrators;
- Testing, piloting, validation and production of technical deliverables;
- Contribution to dissemination, exploitation and standardisation activities.

ADDED VALUE FOR THE CONSORTIUM

- An open-source information exchange format that is already deployed, reusable and adaptable, allowing the project to focus on use cases and demonstration activities;
- The ability to combine cybersecurity, secure data exchange and AI-enabled analysis, with applications in crisis management and operational resilience where relevant to the call.
- Practical experience in European projects, including SAFE4SOC, funded under the Digital Europe Programme;
- A French team able to contribute rapidly to technical activities, pilots and the exploitation of project results.

PARTNERSHIP SOUGHT

We are seeking to join consortia currently being formed or to be introduced to experienced coordinators for the targeted calls. We welcome collaboration with technology companies, industrial partners, universities, research centres, public authorities, civil security stakeholders and critical infrastructure operators, according to each call's requirements.

LET US DISCUSS YOUR CONSORTIUM

Locksight can promptly present its positioning, assess potential complementarities and propose a contribution tailored to your call.
